Rousseau: The Company

Rousseau is turning 65!

Rousseau will be 65 years old this year. To celebrate, we will be launching several competitions with a host of great prizes to be won. Be sure to visit e-rousseau and follow us on social media so you don't miss any of our birthday celebrations.

Rousseau investing in its operations

At Rousseau, we are constantly improving manufacturing processes and are committed to reducing our environmental footprint. Over the last few years, we moved over to a powder painting process for the Spider® line and this has allowed us to reduce our annual CO² emissions and cut down on several tons of hazardous materials.

Various improvement projects have also been launched, including a filtration and concentration system for paint line water baths that will remove many tons of sludge. At the same time, we are also working on reducing water consumption within the plant. Thanks to an ingenious water cooling system, we can now reuse the same water in a loop, thus reducing our consumption by approximately 90%.

Moreover, the ventilation systems are continuing to be updated with smarter controls that adapt to indoor and outdoor temperatures, work schedules, etc. This avoids unnecessary heating and cooling, while retaining a comfortable environment for employees.

New initiatives are introduced on an ongoing basis to reduce our environmental footprint. For example, cardboard and scrap metal are always 100% recycled, new equipment and machinery are always chosen based on their energy efficiency, and green spaces have been built around our facilities, to name a few.

As well as investing in the environment, Rousseau is also investing in its infrastructure.

Our goal is always to serve you better, which is why we took the step of expanding our plant to increase production capacity of our «R» line of heavy duty drawers and cabinets. The whole project took six months from its launch in spring 2014. We now have 100% of the expansion in operation.

The additional space created is now home to new automated machines that are on the cutting edge of technology. They allow us to optimize and significantly increase production capacity of the «R» range of products. They also free up some old manufacturing bottlenecks, which improves fluidity and overall production in the factory. Infrastructure improvements are an essential investment for continuing to create superior quality products while remaining competitive.

These are just a few examples of the many projects underway that are designed to offer the kind of superior service and quality on which Rousseau made its name.

Product numbers on the cover (from top to bottom) : R5SEE-873603, R5AHE-4410, R5GHE-3824, WSC3018, WMC0002, R5XEE-2008

Rousseau: The Company

The L50

For those who would rather do away with keys in their workspace, Rousseau has recently launched a new type of lock: the L50 electronic lock.

It provides quick and easy access to the contents of cabinets. As well as not having to worry about losing keys or having them stolen, this lock also greatly facilitates access management. The L50 allows you to create 20 different codes, including the supervisor code. There are two different management options to choose from. You can decide to give out a code for each user, which means that employees will use their own unique code to access drawers and cabinets. The other option is to assign a unique code per cabinet, and in this scenario everyone uses the same code to access contents. The L50 electronic lock looks neat and can be installed on any "R" or "L" cabinets.

More details are available with the following resources:

- Flyer *L50 - Electronic Lock System*
- e-rousseau
- Training video *The L50 electronic lock from Rousseau*

New sales tools

To ensure our clients have access to the best sales tools, Rousseau has developed a new series of simple, effective, two-sided flyers. They provide essential information at a glance during a presentation or they can be simply used as a reminder for the different features of our product lines. They can also be attached to a quote for personalization reasons or to make it clearer. The goal was to create a series of simple-to-use, easy-to-find flyers that can be quickly sent via email, for example. For this reason, some will be available in paper versions but others will only be available in electronic format through e-rousseau.

For now, three of these documents are available: *The "L" Cabinet*, *The "R" Cabinet* and *L50 - Electronic Lock System*. They can be found in the *Literature* section on e-rousseau. Other documents featuring different product lines will be developed during 2015, so watch this space!

Committed to Sustainable Development, Rousseau Metal Inc. is pleased to use FSC Paper, sourced from well Managed Forests.

Rousseau, working with you since 1950

Since 1950 Rousseau has been designing, engineering and manufacturing modular storage systems for a variety of markets. Our 183,000 square foot facility, a sign of our growth and vitality, is equipped with cutting edge technology.

We offer a complete and integrated solution for all of your storage needs: drawers for shelving and cabinets, industrial shelving, Mini-racking, toolbox system, workstations and more.

Visit us at rousseau-metal.com for all the details.
